## 5. Arguments, error handling and OOP

- (a) What is the difference between passing by value and by reference? Which of the two mechanisms is used for passing arrays and why?
- (b) Describe Java's approach to exception handling. You should include in your answer:
  - a description of the supporting classes in the Java API,
  - (ii) the three fundamental components of error handling in Java,
  - (iii) illustrative code in which three type of exceptions can occur,
  - (iv) an explanation of the finally construct.

(c) Object oriented programming is based on a number of defining principles.

[8]

List what they are and give a brief explanation of each. [8]
