	Alice creates an RSA public key pair. She chooses 17 and 11 as the two	prime
numbers to generate the public key and 7 as the other publicly-known value e .		
	i. How is the public key generated?	[4]
	ii. Explain the principle used to generate the publicly-known value e	[2]
	iii. What is the formula to generate the private key?	[6]
	iv. Alice wants to send the letter "M" (the numeric representation of M is b. What is the formula that Alice should use to generate the cipher message?	88) to [4]
	v. What is the formula that Bob should use to decrypt the cipher message?	[4]
